Research Interests

I build performant and scalable **systems for machine learning** (ML) to train, serve, and enable applications with large-scale machine learning models. My current research focuses on co-designing the **interacting components that compose modern ML systems**, including the ML training data pipeline and compound systems for ML inference. I am broadly interested in applying tools across cloud computing systems, machine learning, and computer architecture.

Education

Stanford University 2025
Ph.D. in Electrical Engineering (expected)
Dissertation: *Performant and Scalable Systems Across the Machine Learning Pipeline*
Advisor: Christos Kozyrakis

Cornell University 2018
B.S. in Electrical and Computer Engineering, summa cum laude
Research Advisor: Edward Suh

Industry Research Experience

Meta Platforms 2020 – 2022
Visiting Researcher, FAIR SysML & Capacity Engineering and Analysis
Mentors: Carole-Jean Wu and Niket Agarwal
· Built, deployed, and optimized distributed systems to improve the performance and efficiency of Meta's production machine learning infrastructure. Projects included a disaggregated data preprocessing service (DPP), a flash storage tier for ML datasets (Tectonic-Shift), and deduplication optimizations for recommendation model training infrastructure (RecD).

Intel Corporation 2019
Graduate Cloud Engineering Intern, Data Center Group
Mentor: Arindam Saha
· Developed an inference serving framework that dynamically manages ML accelerator designs on Intel FPGAs to maximize serving performance across diverse inference requests.

Awards and Honors

Meta Ph.D. Fellowship in AI System HW/SW Co-Design 2023
· ***Full funding and stipend for two academic years***

MLCommons Machine Learning and Systems Rising Star 2023

Top Pick in Hardware and Embedded Security 2022
· *For FPGA-based Remote Power Side-Channel Attacks*

Stanford Graduate Fellowship 2018
· ***Full funding and stipend for three academic years***

Distinguished Practical Paper Award, IEEE Symposium on Security and Privacy 2018
· *For FPGA-based Remote Power Side-Channel Attacks*

Sibley Prize, Cornell ECE 2018
· *Awarded to the top graduating senior in Electrical and Computer Engineering*

Meinig Family Cornell National Leadership Scholar, Cornell University 2014
· *University-wide scholarship for demonstrating "an outstanding degree of leadership"*

United States Presidential Scholar, U.S. Department of Education 2014
· *Program established in 1964, by executive order of the President, to "recognize and honor some of our nation's most distinguished graduating high school seniors"*
